

Mr Copy FTP instructions for Internet Explorer

Other internet browsers may require use of additional FTP software.

Open Internet Explorer:

Type <ftp://107.205.138.191> into the browser.

You should see a white screen that says disk1 in small text.

Go to the view menu and select **Open FTP site in file explorer.**

This should open a window with a folder called disk1.

Hover the mouse in the window, but not over the folder, right click, select **Login As.**

This will open a window that will ask for a username: **ftpguest** and password **fXX2yz**

Now you should be able to open the disk1 folder and find the folder called **FTP_MRCOPY.**

Drag your files into the FTP folder and wait for the status bar to show that the upload is completed.
